## Objetivo: Junior React Native Developer

### Qualifications Summary

A career in IT development with experience in software development, understanding business needs, and collaborating with technical teams. Proficient in programming languages, blockchain, database management, and project management. Skilled at interacting with various departments to comprehend and prioritize requirements.

Executed third-party systems integrations, consistently improving business performance and organization. Focus on reducing costs, streamlining bureaucracy, and eliminating operational bottlenecks.

- Developed new processes and procedures to enhance operational performance, resulting in increased company profitability. Conducted analyses of technical and operational viability of scenarios and actions.
- Prepared technical documentation for users, new analysts, and new employees, ensuring adherence to schedules, adapting to new technologies and tools for continuous improvement.
- Identified the root causes of problems, studied root cause analyses, and improved accuracy in development time estimations.
- Collaborated with managers and technicians across disciplines to support discussions related to environment and security, adopting best practices in governance and corporate IT management.
- Knowledgeable in software development best practices, proficient in both back-end and front-end (full stack) development, version control, and implementation.
- Involved in action plans and projects to meet security and development needs. Proficient in both agile and traditional project methodologies.

- ✓ User Experience – FIAP.
- ✓ Professional Qualification in Digital Entrepreneurship and Information Technology Management – FIAP.
- ✓ Blockchain Fundamentals – FIAP.
- ✓ Professional Qualification in Mobile Application Development – FIAP.
- ✓ English Teens – All Net Education.
- ✓ Game Designer – All Net Education.
- ✓ International Brain Week – Universidade Federal de São Paulo (UNIFESP).

### Professional Experience:

---

#### Prefeitura São Bernardo do Campo

Period: 05/2022 to Present

Position: Fullstack Developer

- Managed technology projects for the sports department.
- Automated developmental projects for the city's sports management platform.
- Created responsive and user-friendly interfaces using front-end technologies like HTML, CSS, JavaScript, React, Angular, or Vue.js.
- Integrated the system with third-party APIs or external services for data exchange.
- Optimized and designed database structures using technologies such as MySQL, PostgreSQL, MongoDB, among others.

- Ensured application security by implementing measures such as authentication, authorization, protection, and data encryption.
- Conducted unit, integration, and functional testing to ensure code quality and debugged errors.
- Collaborated with other developers, analysts, and designers to ensure cohesion and team efficiency.
- Participated in planning meetings, code reviews, and technical discussions to align development strategies.

**Other Experience:**

**Technology Challenges:**

**R3 – Corda | Blockchain Brazil Challenge**

Challenge presented to R3, the Corda platform developer, in collaboration with Distrito for Brazil's inaugural blockchain journey. In this project, two major Brazilian companies posed real business challenges to be solved using Corda blockchain: Mondelez and Brasilseg (BB Seguros).

Team: BBCHAIN (<https://materiais.distrito.me/report/desafio-corda-challenge>)

Challenge 2 Champion:\*\* Addressing Rural Claim Regulation.

Explored the potential for automating the rural claim regulation process and exception analysis, ensuring technical advice issuance to clients and closing claims within 1 business day.

**Additional Knowledge:**
